

GMB Sarathi — Development Blueprint (PRD + ERD + Milestones) — v1.8 (production-ready, final for dev — design-sync verified)

Project: Own GMB audit & management tool ("GMB Sarathi" — working name; = charioteer/guide in Marathi) **Goal type:** Internal agency tool (v1) → white-label product (v2, later) **Owner:** Solo founder, Karad | **Prepared:** 11 July 2026 (v1.4 — production-ready: parity matrices + service layer + real-audit field spec, validated against a live Karad audit) | **Format:** Blueprint Forge conventions (PRD → ERD → Milestones, traceability IDs) **Hard constraint:** The ONLY paid service is **DataForSEO**. Everything else must run at ₹0 (no Google billing card, no SaaS subscriptions).

PART 1 — PRD (What & Why)

1.1 Problem & North Star

GMB Everywhere costs \$30/mo for unlimited use and reports in English dashboards. Dhanda AI (₹11,999/yr) is a consumer app. Neither delivers what the agency needs: unlimited audits + geo-grids + AI content, branded to the agency, delivered in **Marathi over WhatsApp**, at near-zero cost, plus a public lead-magnet page — and neither runs the agency's actual monthly service delivery.

North Star Metric (NSM): Audit reports generated per week that lead to a sales meeting or client retention action.

Goal metrics:

ID	Goal	Target	Deadline
GM-001	Replace GMB Everywhere Power User for internal use	₹0/mo software spend	31 Oct 2026
GM-002	Business name in → branded Marathi PDF audit out	< 5 minutes end-to-end	M4 exit
GM-003	Geo-grid scan cost	< ₹5 per 5×5 scan	M2 exit
GM-004	Public "Google Score" checker captures leads	≥ 10 WhatsApp leads/month	30 Nov 2026
GM-005	Full running cost at 20 clients	< ₹500/month (DataForSEO only)	ongoing
GM-006	GMB Boost service delivered through the tool	≥ 8 h/month founder time saved at 5 clients	M9 exit

1.2 Users & Jobs-To-Be-Done

User	JTBD
U1 Founder (only login, v1)	"When I meet a business owner, I need a professional audit with proof in minutes — and when they become a client, the tool should run their monthly service with me."
U2 Prospect (public page)	"I want to know free of cost how my shop looks on Google, without learning anything technical."
U3 Client (v2 portal — OUT of v1 scope)	"I want to see what my agency is doing for me."

1.3 Full GMB Everywhere parity matrix (every Power User feature mapped)

GMB Everywhere feature	In GMB Sarathi?	How (data source)	Module
		—	all

GMB Everywhere feature	In GMB Sarathi?	How (data source)	Module
Unlimited Audit / Category / AI / Teleport / Local Scan / Website Audit views	✓ Unlimited by design (self-hosted; only per-call DataForSEO cost)		
Works in all locations / unlimited GBP listings	✓	DataForSEO supports any lat/lng worldwide	all
Basic Audit — Place ID, CID, Knowledge ID, services, attributes, categories, GBP links (review-request link etc.), 40+ data points	✓ (~90%: every field that matters)	<code>my_business_info</code> returns IDs, attributes, categories, services; review-request link constructed from Place ID	M1
View Competitor Category — primary + all secondary categories of any business	✓ in dashboard (paste name/URL → instant)	<code>my_business_info</code>	M1
— "always displayed while browsing Google Maps" overlay	⚠ Only via a small companion Chrome extension (optional M8) — a web app cannot overlay Google Maps	Private Manifest-V3 extension calling OUR backend; load-unpacked, personal use	M8 (optional)
Category Finder — related categories from real data	✓	Aggregate categories of top performers per keyword (<code>local_finder</code> scans)	M1
— service suggestions per category	✓	Static taxonomy + AI suggestions	M1/M3
— traffic potential per category	✓	DataForSEO Keyword Data (search volume) — same vendor	M1
— category suggestions from website URL	✓	Crawl site → AI classification	M1.5/M3
— category suggestions from AI chat	✓	OpenRouter free models	M3
Review Audit — trends, analysis, common keywords, filtering	✓	<code>reviews</code> endpoint → trend chart, keyword extraction, UI filters	M1
Post Audit — competitor post timeline, frequency, content, media & links	✓ (verified July 2026)	DataForSEO <code>my_business_updates</code> returns posts of ANY profile	M1
— "post performance insights"	⚠ Approximated (frequency/recency/content stats) — true impressions are private to profile owners, for every tool incl. GMB Everywhere	computed metrics	M1

GMB Everywhere feature	In GMB Sarathi?	How (data source)	Module
Teleport — rank at any location, any term, worldwide	✓	Single-point serp/google/maps query at chosen lat/Ing	M2
Local Scan — compare competitors in one click (categories, services, reviews, location advantage, attributes)	✓ (Compare view + geo-grid)	local_finder + my_business_info batch; distance calc	M1+M2
Website Audit	✓	Own crawler (title/meta/H1/schema/NAP/city keywords) + Google PageSpeed Insights API (free key, no billing card) + optional DataForSEO OnPage	M1.5
AI GMB Post / Review Response / Description / Q&A / Facebook Post generators	✓ all five	OpenRouter free models, Marathi + English prompts	M3
View unlimited GMB categories	✓	Static taxonomy (~4,000) + live competitor data	M1

1.3b Dhanda AI parity matrix (verified from dhanda.app, Play Store + app screenshots)

Dhanda AI feature	In GMB Sarathi?	How	Module
FREE Google Score (checklist: lifetime reviews, active days, review responded, ratings, description, verification, categories + /100 gauge)	✓	score.service rubric covers every checklist item	M1
Top Keywords ("Best Restaurants near me — 106 searches")	✓ for managed clients	Business Profile Performance API (free) — own-profile search-keyword impressions; prospects: category+city volume via DataForSEO keywords_data	M6
Competitor analysis (reviews, ratings, photo count, address, strengths/weaknesses)	✓	my_business_info batch (incl. photo counts) + AI strengths/weaknesses summary	M1
AI review replies, SEO-friendly, pending-queue	✓	M3 generators + M5 review inbox + M6 publish	M3/5/6

Dhanda AI feature	In GMB Sarathi?	How	Module
Daily WhatsApp reports + approve/edit buttons ("Yes, perfect reply / No, I want to edit")	✓	n8n daily cron → new-review alert → AI draft → WhatsApp interactive buttons → approve publishes via GBP API	M6
AI social content (captions) + one-click FB & Instagram posting	✓	M3 generators + existing n8n Meta Graph flows	M3/M6
AI-generated images / product shots	⚠ Partial by design	Template engine (client photos + HTML/CSS layouts) — no gen-AI image API at ₹0 under the DataForSEO-only rule	M6
Festival posts	✓	12-festival creative engine	M6
Monthly Google updates (posts/offers/images)	✓	GBP publishing + n8n scheduler	M6
Ranking progress tracking	✓ better (geo-grid vs single trend)	M2 grids + history compare	M2

Dhanda verdict: 9 of 10 fully covered; AI image *generation* is the single deliberate partial (template creatives instead, ₹0). Our geo-grid, PDF reports and Marathi delivery go beyond Dhanda.

1.3c Agency service-delivery matrix (v1.3 — the tool **DELIVERS** your GMB Boost package)

Your ₹2,999/month GMB Boost service (main report Ch.5.6) mapped to tool modules — the tool becomes your operations platform, not just an audit tool:

GMB Boost deliverable (what the client pays for)	In tool?	How	Module
4–8 GBP posts/month (offers, updates, festivals)	✓ planned	Content queue + n8n scheduler → GBP publish	M6
AI review replies within 24h (approve on WhatsApp)	✓ planned	Daily digest + approve/edit buttons → GBP API	M6
Review collection system (QR + after-sale WhatsApp ask)	✓ NEW	Per-client review-link + QR generator; WhatsApp review-request template sender + 3-day reminder; new-review attribution	M9
10 fresh photos/month	✓ NEW	Owner sends photos on WhatsApp → media inbox → one-click publish to GBP (media endpoint; manual fallback)	M9
	✓ NEW		M9

GMB Boost deliverable (what the client pays for)	In tool?	How	Module
Monthly Marathi report on WhatsApp (calls, searches, ranking map, reviews growth, work done)		Scheduled per-client report: Performance API metrics + grid compare + review stats + delivery checklist → PDF → WhatsApp (n8n cron, 1st)	
Festival hours & creatives across ALL clients	✓ NEW	One-click bulk: special hours update + festival post for every connected client	M9
Profile completeness upkeep (hours, services, description)	✓ NEW	Edit forms → Business Information API; per-client change log	M9
Monthly rank tracking per client	✓ planned	Scheduled grid scans + before/after compare	M2
NAP/citation checklist	✓ NEW	Manual checklist tracker per client (no API needed)	M9
Delivery accountability ("did I do everything this month?")	✓ NEW	Per-client monthly ops checklist widget (posts 4/8, photos 6/10, replies 100%, report sent ✓)	M9

All of M9 runs on the **free GBP APIs + existing WhatsApp/n8n** — ₹0 added cost; DataForSEO usage unchanged. Q&A seeding excluded (Google killed the Q&A API in Nov 2025).

1.3d Validated against a real Karad audit — the Manovedh fixture (v1.4)

The founder audited a real Karad business (Manovedh Hypnoclinic, Somwar Peth) with GMB Everywhere and archived every output (Basic/Review/Website/Post audits, Rank Check, Category Finder, AI tools). That data now defines the production spec and the acceptance test:

Real findings the tool must reproduce (M1 acceptance fixture — expected score ≈ 40-55/100 amber): claimed ✓ · 4.9★/30 reviews ✓ · **phone missing ✗** · primary category "Hospital" — generic/wrong vs "Mental health clinic / Hypnotherapy service" ✗ · **services list empty ✗** · suspicious hours (12-9 AM blocks = entry error) △ · owner reply-rate **6.67% ✗** · 0 review photos △ · velocity ~1.2-1.3/month △ · **7 posts total, one per 293 days**, 171 chars avg, 4 with images ✗ · rank #1 for the niche term "hypno clinic" near the pin (rank ≠ demand — pair rank with search volume) i · website on a rented subdomain (grexa.site) △ · NAP phone mismatch ✗ · meta description missing category/locality ✗ · no category page ✗ · broken heading hierarchy (H2→H5 skips) △ · spelling issue ("Minde") △.

Build items this real data adds (all in M1/M1.5 scope):

Addition	Detail
Link-generator pack (~25 links, pure string templates — zero API cost)	From place_id/CID/KG-ID/domain: review-request & review-list links, knowledge-panel, posts, products, services, other-GMBs-at-same-address (duplicate check) , same-domain GMBs, Apple/Bing/HERE maps

Addition	Detail
	+ competitors-nearby, Facebook Places, Yelp, Google Ads Transparency + FB Ad Library (is the business already advertising?) , Google Trends, site: index checks (all/week/month/6mo), PSI, rich-results test, robots.txt, sitemap.xml, OG preview, WHOIS, BuiltWith, Wayback
New audit checks	phone-missing · services-empty · hours-sanity (overnight/24h anomalies) · generic-category vs competitor mode · review-photos count · Local-Guide count · avg-reviews-per-reviewer (review-quality signal) · reply-rate · velocity 30d/6m/1y · rented-subdomain detector (grexa/wixsite/blogspot etc.)
Review analytics parity	cumulative timeline (dates >1yr approximated — label it, like GMB Everywhere does) · bilingual keyword analysis (Marathi + Hinglish + English tokenizer, dual stopword lists, unigrams + bigrams) · owner-response extraction
Post-audit metrics parity	total analyzed, frequency (every X days), avg chars & words, posts with links/images/videos, monthly bars + cumulative line
Category Finder parity	related categories with search-volume badges (keywords_data), related services per category, categories-from-website, categories-from-chat, Google Trends compare link
Rank check parity	term + pin (distance business↔pin shown) + rank + top-10 list — our grid generalises this

Beyond both tools (our additions): score /100 rubric, branded Marathi PDF, WhatsApp delivery, scan history + before/after compare, public lead-magnet page, full service-delivery ops layer.

1.4 User stories (traceability IDs)

- **US-001** Enter business name/Place ID → full audit with score /100 in <5 min.
- **US-002** Target vs top-3 competitors side by side (categories, services, attributes, reviews, velocity, reply rate, distance advantage, photo counts, AI strengths/weaknesses).
- **US-003** Geo-grid scan (3×3/5×5/7×7, radius 0.5–5 km) → heatmap + average rank; Teleport = single-point scan anywhere.
- **US-004** AI replies for any review, Marathi/English, agency tone.
- **US-005** AI GBP posts, descriptions, Q&A drafts, Facebook posts.
- **US-006** Branded PDF (Marathi headings, logo, before/after-ready) per audit.
- **US-007** One-click send of PDF to any WhatsApp number.
- **US-008** History of every audit/scan/report per business, score trends.
- **US-009** Public page: partial score → full report on WhatsApp after number + consent.
- **US-010** Connect client GBP via OAuth → publish posts/review replies.
- **US-011** Festival creative images from HTML templates.
- **US-012** Secure single login; public page rate-limited so DataForSEO balance can never drain.
- **US-013** Review Audit view: rating trend chart, keyword cloud, filters.

- **US-014** Post Audit view: competitor post timeline, frequency, content/media stats.
- **US-015** Website Audit: on-page basics + speed score + NAP match, folded into /100 score.
- **US-016** Per-client monthly delivery checklist (posts/photos/replies/report) so nothing is missed. (v1.3)
- **US-017** Client photos arriving on WhatsApp land in a media inbox and publish to their GBP in one click. (v1.3)
- **US-018** Each client has a review-request machine: QR + WhatsApp ask + reminder + new-review tracking. (v1.3)
- **US-019** Monthly Marathi service reports generate and send themselves on the 1st. (v1.3)
- **US-020** One click updates festival hours + posts festival creatives for ALL connected clients. (v1.3)
- **US-021** As founder, when a client pays for GMB optimization, I start an **Optimization Sprint**: the tool locks a baseline snapshot (score + full rubric + profile fields + latest grid) so improvement can be proven later. (v1.6)
- **US-022** As founder, the sprint gives me one page with an actionable fix checklist (derived from the audit) where every edit — category, phone, hours, services, description, photos — is done inline and logged with a timestamp. **Every task arrives AI-prefilled with a suggested value (approve, don't compose); per-task time estimates + "Apply all suggestions"; optional one-tap Marathi progress updates to the client's WhatsApp as tasks complete.** (v1.6.1 — *minimum-founder-time principle*)
- **US-024** The Optimization page opens with a client selector; starting a sprint is gated by a prerequisites check: ① business is a Client with a plan ② owner contact saved (name + WhatsApp number) ③ GBP connected (OAuth) or Manager-access confirmed ④ fresh audit ≤ 7 days (else one-tap re-audit). (v1.7)
- **US-025** Sprint checklist also covers the remaining 2026-standard GBP fields: logo & cover photo set, opening date, social profile links, service-area settings (for SABs), expanded attributes, and UTM-tagged website link (so improvement shows in the client's analytics). (v1.7)
- **US-023** As founder, on completion I re-audit and generate a **Before/After Improvement Report** (Marathi PDF: score delta, per-row rubric deltas, field-level changes, grid before/after, work log) and send it on WhatsApp — the proof that justifies the ₹4,999 setup fee and the retainer. Paid clients only (plan-gated). (v1.6)

1.5 Key user flows

Flow A — internal audit: Dashboard → "New Audit" → name + city → candidates → info + reviews + posts + 3 competitors (+ website) → score → audit page → PDF → WhatsApp. **Flow B — grid scan:** Business page → keyword + size + radius → tasks queued → heatmap → history. **Flow C — public checker:** Website page → shop name → rate-limited basic pull → score gauge + blurred detail → number + consent → PDF on WhatsApp → lead in pipeline. **Flow D — monthly service cycle (v1.3):** n8n cron → grid scan + Performance metrics + review stats → work-log checklist verified → Marathi PDF → client's WhatsApp → checklist resets for new month.

1.6 Error states

Case	Behaviour
Business not found	Candidate list; manual Place ID/CID entry

Case	Behaviour
Task timeout/fail	Retry ×2 → partial audit with "data pending" flags
Daily spend cap hit	Block external calls; banner; public page "try tomorrow"
WhatsApp send failure	n8n queue + retry; alert founder
Free-model rate limit	Fallback chain; queue non-urgent AI jobs
Public abuse	3/IP/day, 1 report/phone/day, global cap 50/day, Turnstile
Website unreachable	Skip section; score renormalised; noted in PDF
GBP media upload fails	Queue for manual upload; checklist stays unticked

1.7 Privacy & compliance (DPDP-lite)

Public leads stored with consent text + timestamp; delete-on-request. Third-party data stored as computed insights + report snapshots. Keys server-side only. All data on Mumbai VPS + Supabase. Client photos stored in Supabase storage with per-client access.

1.8 Launch checklist (v1)

tools. live → login works → 3 real audits validated vs live Google → grid spot-check ± 2 → post audit matches known profile → website audit renders → PDF Devanagari correct → WhatsApp delivery works → spend-cap guard tested → public rate limits tested → VPS snapshot.

PART 2 — ERD (How)

2.1 Architecture

2.2 Architecture Decision Records

- **ADR-001 — DataForSEO is the ONLY external data vendor** (place info, reviews, posts via `my_business_updates`, Maps SERP, Local Finder, keyword volume, optional OnPage). **No Google billing card anywhere.** Self-imposed daily spend cap.
- **ADR-002 — OpenRouter free models only.** 50 req/day keyless; optional one-time \$10 unlocks 1,000/day. Fallback chain.
- **ADR-003 — Leaflet + OpenStreetMap tiles** (₹0), not Google Maps JS.
- **ADR-004 — Deploy on existing VPS via Docker Compose.**
- **ADR-005 — Single Supabase project, RLS everywhere; all data routes server-side.**
- **ADR-006 — GBP APIs only for owned/managed profiles** (free, no billing; OAuth consent "testing" mode, up to 100 test users). Scopes: business info, posts, review replies, media, **Performance API**.
- **ADR-007 — Website audits via own crawler + PageSpeed Insights API** (free key) with DataForSEO OnPage optional.
- **ADR-008 — Browser-overlay UX deferred to optional M8 companion extension.**
- **ADR-010 — Access & entitlements.** No client passwords, ever. Client-profile access = GBP Manager invite (day-1, manual) or OAuth connect (TB-009, encrypted tokens, Google consent screen on the CLIENT's device). Per-client service entitlements stored as `businesses.plan` (base package + add-ons: `gmb_boost` / `content` / `whatsapp` / `social` / `ads`); P9 quotas and publish actions are gated by plan. (v1.5)
- **ADR-009 — Service-delivery ops (M9) built on free GBP APIs + n8n only; scheduled jobs never call DataForSEO beyond the monthly grid already budgeted.** (v1.3)

2.3 Database schema (TB-IDs)

Table	Purpose	Key fields
TB-001 <code>businesses</code>	Every business audited	id, name, city, place_id, cid, lat, lng, website, is_client, gbp_location_id, plan jsonb , connection_status (none/manager/oauth), owner_name , owner_whatsapp (for reports/updates) (v1.7)
TB-002 <code>audits</code>	One row per audit run	id, business_id, raw_snapshot jsonb, competitor_ids[], created_at
TB-003 <code>audit_scores</code>	Rubric breakdown	audit_id, total, claimed, category, completeness, photos, reviews_count, reviews_velocity, reply_rate, posts, website, nap
TB-004 <code>grid_scans</code>	Scan header	id, business_id, keyword, grid_size, radius_m, status, avg_rank, cost_usd
TB-005 <code>grid_points</code>	One per pin	scan_id, lat, lng, rank (null = not in top 20)
TB-006 <code>reviews_cache</code>	Latest N reviews	business_id, review_id, rating, text, author, review_ts, replied
TB-007 <code>ai_outputs</code>	Generated content	id, business_id, type, lang, output, approved
TB-008 <code>leads_public</code>	Public checker leads	id, phone, business_name, consent_ts, score_shown, report_sent
TB-009 <code>gbp_connections</code>	OAuth tokens	business_id, refresh_token (encrypted), scopes, connected_at
TB-010 <code>spend_ledger</code>	Every DataForSEO call	id, endpoint, cost_usd, task_id, created_at
TB-011 <code>settings</code>	Caps & config	daily_spend_cap_usd, public_daily_limit, model_chain
TB-012 <code>posts_cache</code>	Competitor/own GBP posts	business_id, post_ts, text, char_count, has_media, links
TB-013 <code>website_audits</code>	On-page results	business_id, psi_score, title_ok, meta_ok, h1_ok, schema_ok, nap_match, city_kw, checked_at
TB-014 <code>service_cycles</code>	Monthly ops per client (v1.3)	id, business_id, month, posts_done/target, photos_done/target, replies_pct, report_sent, checklist jsonb
TB-015 <code>media_inbox</code>	Client photos via WhatsApp (v1.3)	id, business_id, storage_path, received_ts, published bool, gbp_media_id
TB-016 <code>review_requests</code>	Review-ask machine (v1.3)	

Table	Purpose	Key fields
		id, business_id, customer_phone, sent_ts, reminded_ts, review_detected bool
TB-017 optimization_sprints	Before/after proof (v1.6)	id, business_id, started_at, baseline_audit_id, baseline_grid_id, after_audit_id, after_grid_id, status, completed_at
TB-018 fix_tasks	Sprint work items (v1.6)	sprint_id, rubric_key, title, status (todo/doing/done/blocked), source (audit/manual), done_at, note, change_before, change_after

2.4 API endpoints (EP-IDs)

ID	Route	Does
EP-001/002	POST /api/audit, GET /api/audit/:id	full audit pipeline; fetch
EP-003/004	POST /api/grid, GET /api/grid/:id	grid/Teleport create + poll
EP-005	POST /api/ai/generate	AI content via free-model chain
EP-006/007	POST /api/report/:auditId, POST /api/wa/send	PDF; WhatsApp send
EP-008/009	POST /api/public/check, POST /api/public/lead	public checker + lead
EP-010/011	/api/gbp/oauth/*, `POST /api/gbp/post	reply`
EP-012	GET /api/spend/today	cap guard middleware
EP-013/014	POST /api/posts-audit, POST /api/website-audit	post + website audits
EP-015	GET /api/categories/related? kw=	category intel + volume
EP-016	GET /api/gbp/keywords/:businessId	Performance API search keywords (v1.3)
EP-017	POST /api/media/inbox (n8n webhook), POST /api/gbp/media/:id/publish	photo pipeline (v1.3)
EP-018	POST /api/review-request	send ask + schedule reminder (v1.3)
EP-019	POST /api/service-report/:businessId	monthly client report (n8n cron) (v1.3)
EP-020	POST /api/bulk/festival	hours + creative across all clients (v1.3)
EP-021	POST /api/sprint PATCH /api/sprint/:id	start (locks baseline), update tasks, complete (locks after-state) (v1.6)

ID	Route	Does
EP-022	POST /api/sprint/:id/report	Before/After Improvement Report PDF (score delta, rubric deltas, field changes, grid compare, work log) → WhatsApp (v1.6)

2.5 Scoring rubric (deterministic, no AI)

claimed +10 · primary category vs competitor mode +15 · completeness +15 · photos +10 · reviews: count percentile +10, 90-day velocity +8, reply-rate +7 · posts last 30 days +10 · website (linked + basics pass) +10 · NAP +5 = **/100** (red <40, amber 40–70, green >70). Website section renormalises if no site.

2.6 DataForSEO integration & unit costs (verified July 2026)

Endpoint	Used for	Mode	Cost/unit
business_data/google/my_business_info	audit target + competitors	live	~\$0.002/task
business_data/google/reviews	last 30–50 reviews	standard	~\$0.00075/task + per-10-reviews
business_data/google/my_business_updates	Post Audit (any profile)	standard	~\$0.00075–0.002/task
serp/google/maps	grid points, Teleport	standard \$0.0006 / live \$0.002	per query
serp/google/local_finder	competitor discovery	standard	~\$0.0006–0.002
keywords_data	category traffic potential	standard	fractions of a paisa/keyword
on_page (optional)	deeper website audit	standard	~\$0.000125+/page

Per-operation: full audit ≈ **\$0.015–0.025 (₹1.4–2.4)**; 5×5 grid standard ≈ \$0.015 (~₹1.4).

Monthly heavy use ≈ **\$2.5–5 (₹240–480)**; \$50 deposit (never expires; \$1 trial first) lasts **10–20 months**. Guard: EP-012 blocks at daily cap.

2.7b Page & field inventory (production UI spec — see GMB_Sarathi_UI_Mockup.html)

#	Page	Key fields	Primary actions
P1	Dashboard	KPI cards (audits this week, leads, spend today/cap, clients green/amber); businesses table (name, city, score badge + sprint delta badge (e.g., 78 ▲37), last audit, Client/Prospect tag + connection dot (●/○/-), actions)	New Audit · open business

#	Page	Key fields	Primary actions
P2	New Audit	name+city search → candidate cards → manual place_id/CID fallback; options (competitors, website audit, post audit); states: staged running progress (profile→reviews→posts→competitors→website→scoring), no-results, cap-hit-disabled	Run audit (cost preview ₹)
P3	Audit Report	score gauge /100 + band; rubric checklist (10 rows, ✓/✗/△ + points); business card (IDs, hours w/ sanity flags, attributes, categories); links pack (25 grouped links); top-5 fixes (AI, Marathi/English toggle)	Generate PDF · send WhatsApp · re-audit
P4	Competitor Compare	side-by-side: categories, services count, rating, reviews, velocity, reply-rate, photos, distance; AI strengths/weaknesses per competitor	Add competitor · export section
P5	Grid Scan / Teleport	keyword, grid size (1/3×3/5×5/7×7), radius; realistic map (Leaflet/ OSM in prod) with rank pins; avg rank, % in top-3, weak-direction note, rank≠demand card; pin-click popover (rank + top-5 at that point + distance); "who owns this area" table (per business: avg rank, best/worst, top-3 count, distance, Compare→); map/table view toggle; Teleport result = pin + business↔pin distance + full top-10 list; before/after compare incl. per-business rank movement	Run scan (cost preview) · compare runs
P6	Review Inbox	KPI row + review-quality strip (textless count, Local Guides, avg reviews/reviewer,	AI reply (lang/tone) → approve → publish (managed)

#	Page	Key fields	Primary actions
		30d/6m/1y counts ; filters; review rows (stars, author, reviewer-stats, text, replied badge); bilingual keyword cloud; trend chart (dates >1yr approximated)	
P7	Post Audit	metric cards (total, frequency, avg chars/ words, with links/images/ videos); timeline chart; post list (date, text, media, links)	Compare vs competitor
P8	AI Tools	7 differentiated mini-tools , shared lang/tone/ usage-meter/history: ① GBP Post (topic, CTA type, photo from Media Inbox, 1,500-char counter, Google-post preview) ② Review Reply (review picker of pending reviews, quoted context, threaded preview) ③ Description (current read-only + keyword chips + 750-char counter, before/ after compare) ④ Q&A (question input + "suggest 5", Q&A-pair list, bulk save) ⑤ Facebook Post (emoji level, link toggle, FB-style preview, cross-post note) ⑥ Festival Creative (festival + template picker + offer line, 1080×1080 preview) ⑦ Category Finder (current categories chips, related categories w/ search-volume badges, related services, from-website, from-chat, Trends link, apply-to-audit)	Generate · copy · save · queue to publish
P9	Client Ops (M9)	plan-aware quotas; "Today's work" strip (one-tap pending actions across ALL clients, inline) ; per-client month checklist; media inbox grid (WhatsApp photos → publish); review-request	Publish photo · send review request · run monthly report

#	Page	Key fields	Primary actions
		log; bulk festival action; NAP tracker; business-info editor + change log; manage-plan popover on plan chips; "view last report" link + sprint-result chip	
P3b	Website Audit detail (nav item under Business Workspace; feeds the Website rubric row)	NAP match table (GBP vs website vs status); title-tag check; meta-description check + 2 AI suggested replacements; local keywords in content/headings; hours match table; category-pages check; content-depth scale (word count); spelling issues; H1-H6 heading tree with skip flags; click-to-call check; PSI mobile score chip	Copy suggestions · re-crawl
P10	Public Score Checker (no login)	shop name+city input → gauge + 2 visible problems + blurred list → phone + consent → "report on WhatsApp"	Rate-limited check · lead capture
P11	Settings & Spend	DataForSEO key status, daily cap, spend today/month (ledger chart), model chain, WhatsApp sender status, GBP connections list	Edit caps · reconnect OAuth

| P12 | **Optimization Sprint** (v1.6, *paid clients only — plan-gated*) | Sprint header (status, baseline locked chip); fix checklist **grouped by audit source — Profile / Reviews / Posts / Website / Visibility / Citations** (~23 tasks incl. secondary categories, attributes/UIP, Products, booking link, logo/cover, opening date, social links, service-area, UTM link, review-machine launch, website vendor sub-tasks with "**copy brief for vendor**", weak-zone action, citation fixes, + **add custom task**; each task AI-prefilled, expandable → inline edit → GBP API write or manual-mode copy, status todo/doing/done/blocked, timestamp, Notify toggle); projected-score simulator; baseline vs current mini-compare; actions: Re-audit (cost preview), Generate Before/After report (PDF), Send on WhatsApp, Complete sprint | Start/complete sprint · edit fields · publish report |

IA rule (v1.6): **Business Workspace = analysis of ANY business (sales/general); Tools = paid-client work** (AI Tools, Optimization Sprint, Client Ops). Optimization Sprint shows a locked state for prospects ("Mark as client to start").

Workflow wiring: P1→P2→P3(→P4/P5/P6/P7 tabs of a business) → P8 anywhere · P9 only for is_client=true · P10 public route · P11 founder-only.

2.7 NFRs

Audit <5 min; public check <10 s. Keys server-side; RLS; rate limits + Turnstile; encrypted GBP tokens. Docker restart policies; n8n failure alerts; weekly VPS snapshot. Bilingual outputs; Noto Devanagari in PDFs. Hard daily spend cap.

PART 3 — MILESTONES

3.0 Effort model & the timeline answer

Built with **Claude Code** (existing subscription) as primary; **Antigravity free tier** (~20 agent req/day, limits not guaranteed) as backup only.

Milestone	Scope	Effort
M0	Repo, Docker, nginx/SSL, Supabase schema + auth, deploy, DataForSEO account + cap guard	6–8 h
M1	Audit engine + scoring + competitor compare + Review Audit + Post Audit + category intel	13–16 h
M1.5	Website Audit (crawler + PSI + score integration)	4–5 h
M2	Geo-grid + Teleport + Leaflet heatmap + compare view	8–10 h
M3	AI layer: 5 generators, Marathi prompts, free-model chain	4–6 h
M4	PDF service + WhatsApp delivery — MVP gate	6–8 h
M5	Dashboard UI (history, audit/grid/review/post views, spend widget)	12–16 h
M6	GBP OAuth + publishing + Performance-API keywords + WhatsApp approve/edit flow + festival creatives + Optimization Sprint page + Before/After report (EP-021/022)	14–19 h
M7	Public score checker + hardening + launch checklist	6–8 h
M8 (optional)	Private companion Chrome extension	4–6 h
M9 — Service Delivery Ops (build after first paying clients)	Delivery checklist, media inbox → GBP publish, review-request machine, scheduled monthly client reports, bulk festival hours/creatives, info-edit forms, NAP tracker	12–16 h
Total core (M0–M7)		73–98 h
Total with M9 service layer		85–114 h

Your two schedules:

Schedule	Result
2 h/day	

Schedule	Result
	MVP (M0-M4) in ~20-24 days; full v1 (M0-M7) in ~35-47 days (7-9 weeks) ; +~7 days for M9 later.
8 h/day	MVP (M0-M4) in 4-5 days — realistic . Full v1 in 9-12 working days ; M9 adds ~2 days when its time comes. Full parity in 3-5 days is not realistic — OAuth, PDF fonts and real-data debugging always eat the buffer.

Calendar rule: **no building before 1 September** — sales first. M0-M4 early October; M5-M7 by mid-November; **M9 in November-December once 3-5 paying GMB Boost clients exist** — it automates work you are then actually doing monthly (saves ~8-10 h/month at 5 clients, ~25 h/month at 15); M8 only if the overlay habit is truly missed.

3.1 M0 — Foundations (exit: "hello dashboard" behind login; test call logged to spend ledger)

MS0-T01 Next.js 14 + TS repo · T02 Docker Compose + nginx + SSL · T03 Supabase (Mumbai) schema TB-001..016 + RLS · T04 founder auth · T05 GitHub + deploy script · T06 DataForSEO account (\$1 trial), keys, spend ledger + cap middleware.

3.2 M1 — Audit engine (exit: reproduces the Manovedh fixture — same findings, score 40-55 amber; US-001/002/013/014)

MS1-T01 business resolver · T02 `my_business_info` normalize · T03 competitor discovery + compare table (distance advantage, photo counts, AI strengths/weaknesses) · T04 reviews → TB-006 + trend chart + keyword extraction · T05 posts (`my_business_updates`) → TB-012 + timeline/frequency stats · T06 score.service + tests · T07 category taxonomy + related-categories intel + search volume · T08 persistence + audit page · T09 link-generator pack (~25 templated links, \$1.3d) · T10 sanity checks (phone-missing, hours-sanity, services-empty, rented-subdomain, duplicate-at-address link) · T11 bilingual keyword tokenizer (Marathi/Hinglish/English).

3.3 M1.5 — Website Audit (exit: US-015)

MS15-T01 crawler (title/meta/H1/schema/NAP/city keywords) · T02 PSI API mobile score · T03 renormalisation · T04 optional OnPage toggle.

3.4 M2 — Geo-grid + Teleport (exit: US-003; ±2 positions; <₹5/scan)

MS2-T01 grid generator · T02 task batch + poller · T03 rank extractor · T04 Leaflet heatmap + avg-rank card · T05 Teleport UI (top-10 list + pin distance) · T06 history + before/after compare · T07 **rank tables: pin popover top-5, area-ownership table, map/table toggle, per-business movement in compare**.

3.5 M3 — AI layer (exit: US-004/005; 10 Marathi replies human-quality; ₹0)

MS3-T01 OpenRouter client + fallback + counter · T02 prompt library (reply/post/description/Q&A/FB post × Marathi/English × tone) · T03 approve/edit list · T04 **per-tool input schemas**

(CTA types, review picker, char counters, Q&A batch, emoji level, template picker) per §2.7b P8.

3.6 M4 — Reports + WhatsApp (exit: GM-002 end-to-end — MVP COMPLETE)

MS4-T01 HTML report template (brand, gauge, competitor table, review trend, post timeline, grid image, website section, top-5 fixes, Devanagari) · T02 Playwright → PDF → storage · T03 wa.service template message + document · T04 one-click send.

3.7 M5 — Dashboard UI (exit: US-008/012; usable from phone)

MS5-T01 businesses list/search/filter · T02 audit detail + score trend · T03 grid gallery + compare · T04 review inbox (reply-with-AI) · T05 post-audit view · T06 spend widget · T07 polish.

3.8 M6 — Managed-profile actions + creatives (exit: US-010/011 on one real client)

MS6-T01 Google Cloud project (no billing) + OAuth consent (testing) + GBP APIs · T02 connect flow → TB-009 encrypted · T03 publish post + review reply · T04 festival creative engine (12 templates → PNG) · T05 n8n scheduled posts · T06 search-keywords report (Performance API) · T07 daily WhatsApp digest + interactive approve/edit reply flow · T08 competitor photo-count + AI SWOT in compare view.

3.9 M7 — Public checker + hardening (exit: US-009; checklist §1.8 green)

MS7-T01 Marathi-first public page (partial score + blurred teaser) · T02 rate limits + Turnstile · T03 lead → n8n → PDF on WhatsApp → pipeline · T04 security pass · T05 cost drill (100 checks ≈ \$0.2) · T06 checklist + snapshot.

3.10 M8 (optional) — Companion extension

MS8-T01 Manifest V3 skeleton (load-unpacked, private) · T02 content script reads current Maps CID → calls OUR `/api/audit` → side panel · T03 quick buttons (audit, teleport, AI reply). Personal convenience only; never scrapes at scale.

3.10b M9 — Service Delivery Ops (exit: one real client's full month delivered through the tool; US-016..020; GM-006)

MS9-T01 per-client ops checklist widget (auto-ticks from actions) · T02 WhatsApp media inbox (client photos → n8n webhook → library) + one-click GBP photo publish (media endpoint; manual fallback) · T03 review-request machine: per-client short review link + printable QR card (PDF), after-sale WhatsApp sender, 3-day reminder, new-review attribution chart · T04 scheduled monthly client report (n8n cron, 1st): Performance API + grid compare + review growth + work log → Marathi PDF → WhatsApp · T05 bulk festival action (special hours + creative across all clients) · T06 business-info edit forms + change log · T07 NAP checklist tracker.

3.11 Risks & mitigations

Risk	Mitigation
DataForSEO data slightly lags live Google	Directional use; re-scan on demand; spot-verify before client claims
Free-model daily limits	Fallback chain; queue jobs; optional one-time \$10 unlock
GBP OAuth "unverified app" screen	Testing-mode users — fine for agency use
GBP media-upload API quirks	Manual-upload fallback keeps checklist honest
Posts endpoint coverage varies by profile	Graceful "no recent posts found" state
Scope creep toward consumer app	Hard gate: nothing beyond M9 until 10 paying clients + ₹1L MRR
Build time eats sales time	Calendar rule; M4 is a stop/ship gate; M9 only after paying clients exist

3.12 Total cost summary (only-DataForSEO promise, verified twice)

Item	One-time	Monthly
DataForSEO (\$1 trial → \$50 deposit, credits never expire)	₹4,700	~₹240-480 consumed
Everything else (VPS, Supabase, OpenRouter free, GBP APIs incl. Performance, PSI API, Leaflet/OSM, fonts, SSL, n8n, WhatsApp flows)	₹0	₹0
Google billing card	not needed anywhere	—

*v1.8 design-sync: every Claude-Design iteration written back — differentiated AI mini-tools + Category Finder tab (P8), rank tables/popovers/table-toggle (P5+MS2-T07), Website Audit detail page (P3b), grouped ~23-task sprint catalog with vendor brief (P12), Today's-work strip + plan popover (P9), dashboard connection dots + sprint badges (P1), P2 states, review-quality strip (P6). v1.7 (final for dev): *sprint entry gated by prerequisites (client+contact+connection+fresh audit — US-024); client contact fields on TB-001; sprint checklist completed against 2026-standard GBP checklists (logo/cover, opening date, social links, service-area, expanded attributes, UTM website link — US-025)*. v1.6 adds the Optimization Sprint (P12): *baseline-locked before/after proof for paying clients — the delivery vehicle for the ₹4,999 setup fee (pattern validated against Localo task-checklists and BrightLocal white-label improvement reports, July 2026)*. v1.5 added access & entitlements (ADR-010). v1.4 makes the blueprint production-ready: *real-audit field spec (§1.3d), page & field inventory (§2.7b), link-generator pack, sanity checks, bilingual analytics, and the Manovedh acceptance fixture as M1's exit test*. v1.3 adds the agency service-delivery layer (M9 + Flow D + TB-014..016 + EP-016..020 + GM-006): *the tool now also DELIVERS the ₹2,999/mo GMB Boost package — review-request machine, WhatsApp media inbox, scheduled monthly Marathi client reports, bulk festival actions and a per-client delivery checklist*. v1.2 added Dhanda AI parity (incl. WhatsApp approve/edit reply flow); v1.1 added full GMB Everywhere parity (Post Audit via verified `my_business_updates`, Website Audit, optional M8 extension). Forge-compatible: *feed milestone-by-milestone to Claude Code*.
